Mean 8.057; Variance 4.906; scale 1.642 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

France mast cells by allergen stimulation, useful for release from mast cells by allergen stimulation, useful for preventing allergies.

Claim 4, Page 17: 21pp; English.

971872 encodes the light chain of a human type antilize peptide monoclaim and the base of the light chain of a human type antilize peptide the release of chemical mediator from mast cells and basophils stimulated with allergen. The antibody can be used for the
CT 1 (77872 standard; cDNA; 924 BP. The present sequence is the variable kappa chain gene segment.

Octobating human DNA fragment, vk65.3, which was co-injected along with the human DNA tragments vk65.5, vk65.8 and vk65.15 into half day mouse embryo pronuclei, to generate an unrearranged light chain minitorus transgene. The resulting transgenic mice can be used for the production of heterologous (i.e. human) antibodies against specific antigens, this comprises immunishing a mouse with a preselected antigen and collecting antigen binding heterologous
                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            14-APR-1997 (first entry)
DNA fragment vk55.3, containing variable kappa chain gene.
Variable; kappa chain; gene segment; human; DNA fragment; vk65.3;
unrearranged; light chain; minilcous, transque, transqueic, mouse, production; heterologous; antibody; gamma; immunoglobulin; ss.
                                                                                                                                                                          0

Why and Pragments vk65 3, vk65 R and vk65.15 (given in Q7885-Q78855, respectively) each contain a V-kappa gene segment that can be used to form a complete human light chain minilocus transgene for expression in a nonhuman transgenic animal for betarologus antihody production. The deduced amino acid sequences of the V-kappa coding regions are given in RPG-92R-983 Sequence 812 BP; 2.2.8.; 187 5; 199 T;

BNA fraqments containing V-kappa segments from positive phage clones were subcloned into plasmid vectors. Variable gene segments from the resulting clones were sequenced and functional clones were selected on the basis of open reading frames, intact donor and acceptor splice sites and intact recombination sequences. The sequences obtained from four different plasmid clones were lessinated from four different plasmid clones were assumed from four different plasmid clones were

claim 4; Page 12; 1889; Japanese.
T79919-T7992 represent the immunoslobulin heavy and light chain variable regions isolated from peripheral blood lymphocyte strains. These sequences were isolated from the B687 and 10.7 strains of peripheral blood lymphocytes of a Basedow's disease patient. These sequences are pelaced, deleted or inserted into an antibody, to create the antibodies of the invention. The antibodies of the invention activity, and act by combining with thyrotropin receptor. The stimulating activity and act by combining with thyrotropin receptor. The thyroid function stimulating activity and locativity and activity and activity and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09-ocr-1997 (first entry)
Immunoglobulin r101-2 light chain variable region coding sequence.
Immunoglobulin, variable region, heavy chain, thyrotropin receptor:
thyroid stimulating activity: light chain: Basedow's disease; antibody:
peripheral blood lymphocyte; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                       [111] HELLELLE I TELLET HELLE TELLET HELLET HELL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 622 agtgggtetgggacagaetteaeteteaceateageaeetagageetgaagattttgea 681
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    73 acgoagtotocaggoaccotgtotttgtotocaggggaaagagocaccototocigoaga 132

Human DNA fragments vv65 3, vv65 5, vv65 8 and vv65 15 (given in 40852-078855, respectively) each contain a V-kappa gene segment that can be used to form a complete human light chain minilocus transgene for expression in a nonhuman transgenic animal for heterologous antibody production. The deduced amino acid requences of the V-kappa coding regions are given in PAP202P-P62931 Sequence 900 BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Transgenic non-human animals producing heterologous or chimeric antibodies - for binding a pre-determined human antigen with

The sequences obtained from four different plasmid clones were designated p65 3, p65.5, p65.8 and p65.15 (see Q44222:244225,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 21, Fig 42, 196pp, English.

The V-kappa specific oligonucleotide Q50327 was used to probe a human placental genomic UnA library cloued into lambdaEMELS/SPP.T7.

DNA fragments containing V-kappa segments from positive phage clones were subcloned into plasmid vectors. Variable gene segments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Iransgenic non-human animais contg. immunoglobulin heavy chain
trans gene - used to preduce useful antibodies by isotype
                                                                                                                  10.NOV-1993 (first entry)
Human DNA fragment vk65.5 containing V-kappa gene segment.
Immunoglobulin: light chain variable region; minilogus;
isotype switching; unrearranged functional Vk gene segment:
human light chain transgene; ss.

DNA fragment vk65.5, containing variable kappa chain gene.

Bustiable: kappa chain: gene segment; human: DNA fragment; vk65.5;

unrearranged; light chain: minilocus; transgene; transgenic; mouse;

production; heterologous; antibody; gamma; inmunoglobulin; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is the variable kappa chain gene segment containing human DNA fragment, vk65 5. Which was co-injected along with the human DNA fragments vk65.3, vk65.8 and vk65.15 into half day mouse embryo promutel, to generate an unrearranged light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      minilocus transgene. The resulting transgenic mice can be used for the production of heterologous (i.e., human) antibodies against specific antigens, this comprises immunising a mouse with a preselected antigen and collecting antigen binding heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Prodn. of heterolegeus human immunoglobulin(s) - by immunising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 53.5%; Score 200: DB 27: Length 900: Best Local Similarity 86.0%; Pred. The leader peptide and the LV region are encoded in different reading frames. The LV region corresponds to the last three amine acids of the leader peptide and the rearranged V2 gene. Close two such LV regions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Oligometic immunoalobulin(s) with high avidity for antiden(s) -
formed by duplicating esp. Variable region of light their of 196

Claim 42; Fig 16: 104pp; English.

This sequence encodes an aberrant light chain containing two L'V regions. Antibody molecules of the invention can include one or two such aberrant light chains to produce heavier antibodies. These heavier antibodies were found to have higher avidity than antibodies with just a single copy of the L'V region. The clone is not complete; it starts with the G of the ATG initiator codon.

                                                                                                                                                                                                                                                                                                                                                        parts of the heavy or light chains and having restriction sites to permit cloning. The extension prods. were isolated and sequenced. The recombinant human monoclonal antibody (MAb) binds to a discontinuous epitope on the HIV gpl20 envelope glycoprotein, blocks the binding of gpl20 to the CD4 receptor, and neutralises a broad range of HIV isolates. The MAB may be used to treat immune deficiency, esp. at doses of 0.1-10 mg/kg.

Compared Mich sequence of FIDS VK (042707) - sequence differs from other FIDS VK sequence elsewhere in the specification) was compared With germline yeare Humwills (042706), showing 37-78 similarity. By nucleotide sequence analysis, FIDS appears to be derived from a member of the VK III subgroup gene family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        10-NoV-1997 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Example 21: Fig 43: 196pp; English.

The V-kappa specific eligonalestide 25927 was used to probe a human placental genomic ENA library closed into lambdagment (Sp6/77).

DNA fragments containing V-kappa segments from positive phase clones were subcloned into plasmid vectors. Variable gene segments from the resulting rances were sequenced and functional clones were selected on the hasis of open reading frames, intest donor and acceptor splice sites and intest recombination sequences. The sequences obtained from four different plasmid clones were designated from four different plasmid clones were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4, Cape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          124 CCCAGGGTOGTCATTTATGGTGGAAAGAGGAGGAGGAGTGGTAGGGGGAAGAGGGTTCAGT

Human DNA fragments vk65.3, vk65.8 and vk65.15 (given in V8852-Q78855, respectively) each contain a V-kappa gene segment that can be used to form a complete human light chain minilocus transgene for expression in a nonhuman transgenic animal for heterologous antibody production. The deduced amino acid sequences of the V-kappa coding regions are given in RF928731 Sequence 900 BP; 220 A; 241 C; 201 G; 238 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Transgenic non-human animals producing heterologous or chimeric antibodies - for binding a pre-determined human antigen with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 900;

Example 21: Fig 43: 94pp; English.

The present sequence is the variable kappa chain gene segment ontaining human DNA fragment, vk65:8, which was co-injected along with the human DNA fragments vk65:3, vk65:5 and vk65:15 into half day mouse embryo pronuclei, to generate an unrearranged light chain minitocus transgene. The resulting transgenic mice can be used for the production of heterologous (i e human) antibodies against specific antigens, this comprises immunising a mouse with a preselected antigen and collecting antigen binding heterologous human gamma immunoglobulins.
DNA fragment vk65.8, containing variable kappa chain gene. variable; kappa Châin, gene segment; human: DNA fragment; vk65.8; unrearranged; light châin; minilocus; transgene; transgenic; mouse: production; heterologous, antibody, gamma, immunoglobulin; ss.
